as the ability to show real sun and shadow positions.

3:09

If you haven't done so already, open a new blank drawing.

5:07

For this track, we'll be working in imperial units - feet and inches.

4:45

If you have custom template you'd prefer to use or a blank file open already,...

...then you can switch your units by going to 'Window/Model Info/Units' to ensure we're all on the same page for this and all the later lessons.

While still in the 'Model Info' window, we can check the 'Geo-Location' tab and confirm that the model has no location coordinates yet.

We can add a location here by clicking 'Add Location' or by going to 'File/Geo-Location/Add Location...' as 'they both do the same thing.

Select 'Add Location' and then a pop up appears with a map.
