

So you want to print 3d fasteners, here is how to get them the easy way. Work easier rather than harder.

Step 1

Use McMaster-Carr. Find the fastener you want to print. Double click on it and notice the little note that is labeled Product Detail.

Click on it and download as a 3Step File.

Next go to Freecad : [FreeCAD: Select your platform \(freecadweb.org\)](https://freecadweb.org), select your platform and download and install the App.

Open Freecad and convert the 3STEP file to an STL format. Away you go, happy printing.
